Experience

Senior Java/Kotlin Consultant

Zero8.io

📅 October 2021 – Present

📍 Stockholm

- **UC / Enento Group:** Senior backend engineer on credit- and business-information platforms. Java, Kotlin, Spring Boot, Kafka, PostgreSQL, Kubernetes. Contributing to AI / LLM initiatives within the product. Brought in for architectural judgement rather than headcount — trusted with design decisions, build-vs-buy calls, and cross-cutting work; the engineer colleagues turn to for a second opinion or to have an unfamiliar part of the stack explained.
- **PostNord:** Senior Java backend engineer on logistics-platform services. Java, Kafka, PostgreSQL, OpenShift. Contributed to architecture and integration decisions alongside delivery.
- **ATG:** Mob-programmed a new high-performance, event-driven microservice backend for International Betting and HarryBoy. Spring Boot, Kotlin, Oracle, Solace, OpenShift. Helped shape event topology, service boundaries, and integration patterns for live race-day betting throughput.

Senior Java Consultant

Nexer Group

📅 April 2021 – October 2021

📍 Stockholm

- **Hi3G:** mob-programmed a new microservice sales backend in Spring Boot, Java, and Kubernetes. DevOps responsibilities across Rancher, Jenkins, Istio, and proxy configuration — bridging dev and ops rather than throwing things over the wall.

Backend Software Engineer

Vimla! / Telenor

📅 Jan 2019 – April 2021

📍 Stockholm

- Designed, built, tested, and operated microservices in Node/TypeScript and Quarkus / Vert.x with Kotlin.
- Drove team adoption of mob programming as a core practice — improving knowledge spread, code quality, and reducing bus-factor risk on critical services.

Software Engineer / Hardware Manager

VirtualStores

📅 Oct 2016 – Jan 2019

📍 Stockholm

- Hand-held shopping-scanner programme: hardware prototyping, AWS server development, mobile app, embedded firmware, and evaluation of partner technologies.
- Fullstack PHP and ASP.NET C# work plus operational management for shopping kiosks and digital signage on Azure.

Fullstack Developer

Zuccero / Magazinos & THS Consultings

📅 March 2015 – Oct 2016

📍 Stockholm

- Magazinos: digital newspaper distribution platform in Ruby on Rails on AWS.
- OneGetTwo: custom PHP / WordPress booking-service platform on AWS. Edward Lynx: reporting web service in PHP / Laravel.

Coding Philosophy

“Writing code together that we all can understand, and surfacing issues before they arise.”

Strengths

Architecture & design

Build-vs-buy judgment

Mob / ensemble programming

TDD

Mentoring & explaining

Polyglot

Pragmatic

Core Stack

Spring Boot

Quarkus

Kafka

Solace

PostgreSQL

Oracle

Kubernetes

OpenShift

Docker

AWS

Azure

gRPC

OpenAPI

CI / CD

Splunk

Languages

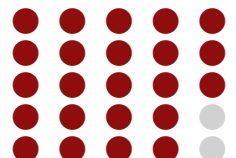

Kotlin

Java

TypeScript

Python

C#

Also worked with:

SQL

Bash

Go

Ruby

Elixir

PHP

Scala

Swift

C/C++

JavaScript

Kafka

NoSQL

AI/LLM

K8s/OCP/K3s

Education

B.Sc. in Software Engineering

KTH STH

📅 paused – 2012

Thesis: *Indoor localization of hand-held Shopping Scanners* TRITA-STH, 2017:38
